

LI.FI vs. Other Aggregators

LI.FI is the most comprehensive and best-in-class aggregation protocol on the market.

We're offering the best API:

- We support the most chains, bridges, DEX aggregators and single DEXs
- We support the Most Routes
- We offer the Best Prices
- Fastest API (if you only whitelist the bridges & DEXs our competition supports)
- Cross-Chain Contract Call Support
-

Values & Positioning:

- Integrity
 - no misleading comparison. An API with three supported bridges is faster than one with 11. Supporting all DEX aggregators is slower than supporting just one. [Adjust our API to your needs.](#)
- We don't fake volumes to appear bigger than we are.
- We're 100% committed to aggregation.
- We're 100% focused on B2B, focusing on your developer's needs.
- We're 100% neutral and don't build our own bridge alongside
- We allow not only asset transfers but also cross-chain contract calls
- We not only aggregate liquidity networks but also allow you to plug in the data messaging bridge of your choice (Axelar, Nomad, LayerZero, Hyperlane - soon)
-

Approach:

- Security First:
 - [Read more in the Security First-Section](#)
 - Adjust our tech to your risk profile
 - by allowing and denying chains, bridges, and DEXs as you trust them or not
 - We have the most supported bridges, chains, and DEXs, which [can be turned on and off on a per-request basis](#)
 - - this also affects API performance. Adjust to your use case.
- *
- We're the most active research company in the bridge ecosystem
 - Read up [on trust assumptions](#)
 - Use our [arbitrary messaging bridge comparison framework](#)
 - (40+ pages)
 - We're maintaining the official ethereum.org bridge-documentation
 - In collaboration with Consensys, we're working on a comprehensive bridge-risk comparison framework
- *
- Best Support
 - We provide the best documentation for our SDK and API
 - We're providing a Discord customer support bot for our clients to automate self-help for their users
- *
- Multi-Chain Gas Provisioning
 - Contact us to discuss how to deal with the lack of gas on destination chains

- *
- Enterprise Support
- - We genuinely understand large-scale needs
- - Get dedicated API instances independent of other clients' traffic and only get upgraded on demand.
- - Talk to us about compliance
- - Custom integrations with private institutional-grade blockchains
- *
-

Top Companies Trust LI.FI

We work closely with companies like Consensys, Ledger, BitGo, Bitpanda , and other enterprise players.
