

CCR [On-hold]

Community code repositories (CCR)

These bounties are on-hold until further notice The community code repositories are a small bounty framework where developers can take up tasks taking up to 20-30 hours to complete and thereby create an open source code library to be used by any other developer on the network.

The CCR concept is budgeted for by the Secret Network development Committee and open projects can be found in the [Github repository](#) . Before taking on a task the Development committee leads will have a quick conversation with you so they can guide you in the project.

Upon completion the code for the created tool is open sourced and the developer is paid the agreed upon bounty of up to 2,500 USD.

To contribute please reference the [Contributing.md](#) in the CCR repository.
