

Hey guys, I just created an Eigenpod and wanted to add my already existing validator to it.

Unfortunately I'm not able to proceed because my currently active withdrawal credential starts with 0x01 and I cannot change it to the my new Eigenpod address. Wagyu Key Gen only accepts addresses with 0x00.

So is there any option to contribute with Eigenlayer now? Or is the only option to completely exit my validator from beacon chain and activate it again? That would be really disappointing because I need to wait 2 months again (exit and activation time).
