

Javascript

Learn how to setup our framework agnostic javascript client 1

Install the SDK

Using npm:

```
...
```

Copy `npm install @clustersxyz/sdkviem`

```
...
```

Or yarn:

```
...
```

Copy `yarn add @clustersxyz/sdkviem`

```
``` 2
```

Get an optional API Key

You can get an API Key by visiting <https://clusters.xyz/developer/api-keys> 3

Create your Clusters client

Import

```
...
```

Copy `import { Clusters } from "@clustersxyz/sdk"`

// 3 different examples `const clusters = new Clusters();`

// with testnet enabled `const clusters = new Clusters({ isTestnet: true });`

// with api key `const clusters = new Clusters({ apiKey: "abc123" });`

```
...
```

Helper functions & variables

`validNameRegex` The regex for a valid cluster name `getImageUrl(name)` Get's the profile pfp url of a specific cluster name `getProfileUrl(name)` Get's the profile url of a cluster name `normalizeName(name)` Will clean up the name for onchain submission `isNameValid(name)` Checks if the name is a valid name and will be accepted on chain [Previous Wallet Generation Next Address → Cluster](#) Last updated 5 days ago
