

Blockscout Open-Source Explorer

Blockchain explorer for inspecting, analyzing, and interacting with EVM chains and rollups.

See the newly redesigned Blockscout in action on Ethereum, Optimism, BASE and more! Update your instance to the newest frontend now. [Get started here](#) !

- <https://eth.blockscout.com/>
- <https://base.blockscout.com/>
- <https://optimism.blockscout.com/> * Blockscout provides a comprehensive, easy-to-use interface for users to view, confirm, inspect and interact on EVM (Ethereum Virtual Machine) blockchains. Blockscout currently supports a wide range of projects and chains, see our [projects list](#) for more details.

?

While there are several explores available to blockchain projects, most are closed systems (ie Etherscan, Etherchain) which are not independently verifiable. Blockscout provides a much needed open-source alternative. As the multi-chain paradigm continues to take hold in both private and public settings, transparent tools are needed to analyze and validate transactions.

Information on the latest release and version history is available in the [Github repo](#) .
