

seid query upgrade applied

If upgrade-name was previously executed on the chain, this returns the header for the block at which it was applied. This helps a client determine which binary was valid over a given range of blocks, as well as more context to understand past migrations.

Usage: seid query upgrade applied [upgrade-name] [flags]

Flags: --height int Use a specific height to query state at (this can error if the node is pruning state) -h, --help help for applied --node string : to Tendermint RPC interface for this chain (default "tcp://localhost:26657") -o, --output string Output format (text|json) (default "text")

Global Flags: --chain-id string The network chain ID --home string directory for config and data (default "~/.sei") --log_format string The logging format (json|plain) --log_level string The logging level (trace|debug|info|warn|error|fatal|panic) --trace print out full stack trace on errors Last updated on July 1, 2024 [upgrade module versions](#)
