

# constructor

The constructor initializes the SDK and sets the RPC endpoint used for network calls.

...

Copy public constructor(config: Config, decimalFetcher?: DecimalFetcher)

...

Name	Type	Description
config	Config	This includes the rpcURL, the endpoint that data will be acquired through.
decimalFetcher	decimalFetcher (optional )	This optional parameter allows flexibility to get only the decimals of tokens that will be used.

If unspecified, it is automatically generated and will fetch the decimals of all tokens.
