

Thanks [@cmwaters](#) for the CIP!

Mind elaborating whether the 5/6 quorum is sufficient if observed at a certain height before the upgrade height? For example, if at height $x < \text{upgrade_height}$ the quorum is achieved, but at a later height $y < \text{upgrade_height}$ the quorum is not maintained (due to voting power change), does the upgrade still proceed as planned at upgrade_height ?

Also, can the upgrade occur at an earlier height z ($z < \text{upgrade_height}$) upon receiving a `MsgTryUpgrade` for that height z ?
