

We propose to work on the available tasks in the following sequence:

- Platform reliability and interface improvements
- Synthetic tokens: supporting synthetic tokens through the PvP AMM or otherwise would help improve the platform by providing more options to traders
- X4 / new chains: these should be worked on after the launch of synthetic tokens

In parallel with these tasks, the interface should continue to be worked on, some improvements to be made:

- Position sharing
- Trading view integration
- One minute charts
- Trade history improvements
- Close a position and receive any supported token
- Translations
