

eth_sendTransaction

Not supported by Infura Theeth_sendTransaction JSON-RPC method is not supported because Infura doesn't store the user's private key required to sign the transaction. Use[eth_sendRawTransaction](#) instead. You can use[web3.eth.sendTransaction](#) , which in turn signs the transaction locally using the private key of the account, and sends the transaction via[web3.eth.sendSignedTransaction](#) , which is a wrapper foreth_sendRawTransaction .
