

Getting started with CAPE

You're ready to spin up CAPE!

CAPE relies on zero-knowledge proofs for privacy and they don't always play nicely with browsers, so for this version of CAPE you will run the wallet inside a Docker container. Consider yourself early! 🚧

To use CAPE, follow the instructions in this section. They should not be too scary, even if you have never used the terminal before. [If you have any questions, find us on Discord!](#)

If you prefer to follow along with a video, you can view a video walkthrough [here](#) and [here](#) . Note: These videos were created before CAPE was migrated to Arbitrum Goerli, but the overall instructions are similar. We'd love to stay in touch with you, our earliest users. If you would like to be added to our list for perks, special events, and first looks at new releases, [please click here to add your email](#) before getting started!
