

Hello restakers,

I am Jasper from the Rocket Pool community. You may have read some of my writings in the past, notably [The Layer Zero Bull Case for Rocket Pool](#) that is largely dependent on Eigenlayer interoperability.

The rough idea is simple - Rocket Pool represents the majority of solo stakers on the network by some estimates. Since most node operators are already representing Rocket Pool, having the network be able to opt into Eigenlayer will supply Eigenlayer with an incredible level of decentralization. For reference, there are >3,000 node operators registered already with Rocket Pool that could be quickly converted to Rocket Pool-Eigenlayer operators.

In pursuit of this and with discussion from the Rocket Pool and Eigenlayer teams, I have worked to propose this bounty to the Rocket Pool grants and bounty committee. This committee will evaluate if the proposal is worthwhile to fund. Having an enthusiastic response from the Eigenlayer community would certainly increase the chances that this project is approved.

You can read the application here: <https://dao.rocketpool.net/t/round-8-gmc-call-for-bounty-applications-deadline-is-january-14/2558/2?u=jasperthegovghost>

I am happy to answer any questions.

Best,

jasperthefriendlyghost.eth
