

Hi Aave community,

I'm working for a company called FutureBricks. We provide property development loans to SME housebuilders in the UK that are secured on the property itself.

We are looking to explore DeFi to broaden access to this type of asset to the crypto community. I'm quite new to Aave and am keen to find out more about any potential for us to partner with this protocol and community but am not really sure where to start, who to speak with etc.

Any pointers would be highly welcomed :) Apologies if this is too broad/generic.
