

# How Council Selection Worked

## Before the screening period

The 5 member council worked together to create a single application template and rubric they would all use. This was done in the presence of the advisors so the advisors would know what the council was looking for to make sure they were guiding protocols in the correct direction.

## During the screening period

In the initial review, each application was randomly assigned to three council members. The council members separately reviewed each application and gave either a yes or no along with some feedback for why this decision was made. Each council member had slightly different ways of looking at applications but all were guided by the rubric they created together.

After the initial review, any applicant who got 3 yes votes automatically passed the screening period. Any applicant who got 3 no votes automatically failed the screening period.

Applications that had at least 1 yes and 1 no vote in the initial review were reviewed by a randomly selected 4th council member. If at this point the application had 3 yes or 3 no votes it was accepted/rejected. If it was tied 2 yes votes and 2 no votes the fifth council member was used as the tie breaker.

## Results

Below are tables of the applications recommended and not recommended by the council along with the ARB that was requested, and how many yes votes they got.

In total 77 out of 163 applications were recommended for a total amount of 26,414,599 ARB

The council's feedback can be found [here](#)

## What Happens Next

Any protocol that was recommended by the council will automatically move to a snapshot vote at the end of this week where the DAO will make the final decision of if their incentive application will be funded or not.

Should the DAO feel an application that was not recommended by the council should be funded, any delegate with sufficient voting power (500K ARB) may post a snapshot requesting to fund said applicant just like they would any other DAO proposal.
