

Hello

I'm simple. I will vote for myself every single time. I'm greedy and I'm selfish. I want my, at the moment of writing, 115 UNI to become more valuable. In order to achieve that, I will avoid UNI leaking out for policies such as airdrops. And if there was something to gain from handing out treasure's UNI, then it would have to be dependant on me getting something from it. I only vote for my own's sake, and I always vote against losing value.

UNI is an ERC-20 token, which means that, to most effects and purposes, UNI is fungible. This also means that if I vote for value, your tokens also become more valuable. These are the same tokens you can use for voting. And so, incidentally, my greed will benefit you as well. You may be interested in delegating your UNI to me if you don't like spending gas, if you're lazy and prefer not to pay attention to governance or if you find this pitch entertaining. In particular, I would like to have your votes delegated to me if you want UNI to be worth a lot in the future.

Agenda:

- UNI in treasure is not given away for free, no matter the pressure. We were lucky and others weren't, but being lucky is not unfair. Charity can still be voluntary.
- Uniswap as Ethereum #1

Decentralized Market. It's simple, and that's why it's the best. It could potentially be the default way to swap tokens, and built into an standard.

- UNI as stake and passive income. It is a governance token, so UNI holders put the conditions, and that makes it valuable and good to HODL. UNI will be valuable because it will govern and collect small fees over a market, which will be valuable due to holding the biggest amounts of liquidity possible.
- Keep Uniswap simple. When ETH 2.0 launches, keep it as a shard, don't move it to L2. It's the biggest market, it deserves being in mainnet. Other L2 dapps will be the ones interacting with Uniswap, making it a convenient market node for all.

My address so that you can delegate:
