

Manual cleaning an instance from the previous deployment

In order to delete build artifacts anyone can run `./rel/commands/clear_build.sh` from the root project directory. It will delete these folders:

- `delete_build`
- `&deps`
- `directories`
- delete node modules located at
- `apps/block_scout_web/assets/node_modules`
- `&apps/explorer/node_modules`
- `deletelogs/dev`
- `directory`

You should also delete static assets (`apps/block_scout_web/priv/static` folder). Before rebuilding to apply changes to the front-end, run the previous command with `-f` flag:

```
./rel/commands/clear_build.sh -f
```
