

Good morning, afternoon, and evening depending on where you are in the world. Obviously the main topic at this moment is launching V2.

My thought or specifically question is once V2 is launched and up/running. How quickly is it able to launch onto other chains beyond Arb, and AVAX. In my mind could GMX be launched on for example bitcoin network, sol, optimism, etc? How realistic would it be to have GMX launch on a variety of chains or have cross chain compability?
