

Dear Lido Community,

Welcome to our monthly news, where we provide you with updates on our efforts to establish a secure Ethereum environment. Here's a summary of notable developments since our last update.

Lido x SSV Mainnet Cohort 2:

Continued active participation and management of Thoughtful Tiger Cluster. Completed further task outlines by Lido Simple DVT Mainnet Guide.

Advancements & Result:

- Upgraded SSV services.
- Investigated multiple missed proposal issues of the cluster and reported logs to LIDO and SSV team.
- Monitored the health of SSV nodes with DKG services of all cluster members.
- Provided support to cluster members including node and service configuration, log collection etc.

Next Steps:

- Member: Continue to perform required cluster member duties and proactively monitor the health and performance of SSV nodes and DKG services.
- Cluster Co-Ordinator: Maintain open communication with other cluster members, offering support and guidance as needed.

Lido x SSV Testnet Round 4:

Maintain active participation in Journalistic Mama Cluster. Completed further tasks as outlined by Lido Simple DVT Testnet Guide, focusing on node maintenance and key management.

Advancements & Result:

- Upgraded SSV services to the latest version.
- Regularly monitoring the health of the SSV node and DKG services.
- Continuing to verify keys and signed transactions contributing to the cluster activity.

Next Steps:

- Continue to perform required cluster member duties and proactively monitor and maintain node health to ensure optimal performance.

Missed Proposal Investigation

Investigating missed proposal issues to improve node performance and reliability.

Advancements & Result:

- Analyzed the reported missed proposal issue across various clients, including network conditions, node configurations and software updates.
- Implemented optimization to improve node performance.

Next Steps:

- Continue to monitor node performance and identify potential areas for improvements.

SDVT Obol Cluster Maintenance

Advancements & Result:

- Regularly monitored the health and performance of the cluster nodes.

- Collaborated with SDVT team to address any issues and best practices.

Lido General

Node operations:

Ensured optimal node performance and security through regular maintenance, updates, and enhanced monitoring.

Node updates:

Upgraded node software and configurations to enhance performance and security.

Monitoring improvements:

Refined alerting systems to provide more detailed information for faster troubleshooting and resolutions.

Best Regards,

RockLogic Team
