

Hi all!

I was wondering if it was a reasonable idea to put GMX into the GLP pool.

What are the Pros, what are the Cons?

GMX has a fairly high trade volume on Uni and my thought process was to profit from those high trade volumes by generating fees through the GLP pool.

We could either add GMX into the pool or exchange it with one of the less used tokens (Uni and USDT are underutilized most of the time).

Any feedback is welcome and i would also appreciate any explanation if and why it would not be a good idea!
