

Block Explorers are one of the most fundamental tools needed for any blockchain to thrive, and amazingly, Ethereum is extremely centralized in this. Everyone goes to Etherscan 10x a day.

I love Etherscan, and am so impressed with how it works... I also love the USA and am soo impressed at the quality of life there... But both of these are centralized golden cages, and we are trying to do something different, better, an open field with rainbows butterflies and real customization.

There are 2 AWESOME Open Source Block Explorers currently under development, and every 2 weeks on Friday we have an open call (Inspired by the plasma call) where the people working on projects similar projects can feel welcome to attend ;-D

If you would like an invite to the telegram where we organize, please message me

Links!

First 2 calls:

**1:**

<https://youtu.be/CXtkv-HzEso>

**2:**

<https://youtu.be/Kry1PNp7TJk>

I have sooooo many more... but i can only put 2 links in a post
