

Celo

Celo is a fully EVM-compatible, Proof of Stake (PoS), layer-1 protocol that features a mobile-first platform, built-in stablecoins, collateralized by crypto and natural assets.

Celo is a platform that acts as a global payment infrastructure for cryptocurrencies targeting mobile users. Celo operates native, ERC20-like stable tokens like [cUSD](#), [cEUR](#), and [cREAL](#).

See also * The [official Celo documentation](#) * for more information. * The [key differences between building on Celo and Ethereum](#) *. Select an option below to get started with the Celo network.
