

Currently, for Binance, only way to deposit and withdraw dYdX token is via ERC-20 version.

Similar to how Solana's growth was fueled by FTX able to easily deposit and withdraw. Major centralized exchanges able to support dYdX chain would make onboarding new users easier (as currently, it's withdraw in ERC-20 version and has to go via bridge which cost a lot in gas fee and also many hours). Therefore, if the community is not yet focused on such onboardings, would suggest the community to focus on such features on major exchanges.
