

hello there !

I created a bash

script that fully automates the process of configuration, installation and running a Taiko node, either prover, proposer, or both. I also created a PR to be included in the official repo, currently waiting for that. Until then, here s the script

<https://github.com/tudorpintea999/TaikoNodeAutomation>

IF you re not curious about the script and you only want to use it, copy and paste the next command in your linux terminal to start the installation

```
git clone https://github.com/tudorpintea999/TaikoNodeAutomation.git && cd TaikoNodeAutomation && sudo chmod +x taikoinstaller.sh && sudo /bin/bash taikoinstaller.sh
```
