

Hi everyone,

This proposal just went up today as an expedited proposal and per [@pmuecke](#)'s advice I am starting this thread.

Summary:

The Shillables team was late to filling out the form to submit our contract's addresses to be included in the next network upgrade to assign an admin address to pre v1.10 contracts. After talking with ertemann and assafmo and a few others we were told it wouldn't be too late to get our contracts appended to the list of contracts that were outlined in prop #262

[Proposal #262 | Secret Network | Keplr Dashboard](#) It was also said that it would be low risk to append our contracts if our proposal were to pass.

Benefits

We unfortunately thought that we had more time to submit our contract addresses to the original form that was setup for prop #262

. We recognize that this isn't the typical way of doing things but hope that we will have the support of the community in this. The overall purpose of this proposal is to allow for a better user experience on the dapps we've built and thus continue to make a positive impact for the Secret Network as we continue to build on.

The following are the benefits for our community if this proposal passes.

- We are seeking to upgrade all of our Shill Stake contracts that are used on our NFT staking platform to allow for multiple rewards to be given without impacting the users. We currently support staking for 7 NFT projects and for our \$Shill token. If this doesn't pass we will have to require users to unstake and restake to a new pool/contract in order to receive multiple rewards which won't be the best of experiences
- The Wolf Pack PackBuilder is included to be able to fix a problem with the contract where new payment methods can not be added. Currently we are making users pay \$1200 \$Shill to add a wolf to their pack and do not have a way to lower this price. As the price of our token increases we would like to be able to change the price if our community votes to lower it.
- We are also seeking to add out SNIP-25 contract for \$SHILL to this list in case there are any key privacy updates. If the prop doesn't pass it will mean another unfavorable user experience to migrate users to a new SNIP contract in the future
