

Dual-token pools like ETH-USDC, BTC-USDC, etc can be entered by depositing a single token or a pair of token.

However when exiting the pools, the only choice is to exit with the Pair of tokens (e.g. ETH+USDC).

In some jurisdictions, crypto-crypto trades are not a taxable event whereas crypto-stablecoin ARE taxable. By exiting a GM pool to the single token, a user can potentially delay taxation which is a great benefit.

This proposal would be to allow to Sell out of a dual-token GM pool to just one single asset. Of course there could be some slippage, but this will be beneficial to the remaining LP accruing the fees so win-win.

Thanks for the consideration!
