

Hello Nola,

If you have Numeraire already in a wallet

Go across to Account → Model → two overlapping circle button OO = Manage stake

You can then select that

There will be two tabs, Change Amount and Change Type, they are self explanatory, change type lets you change whether you want to stake on CORR or stake on MMC or stake on 2x or 1/2 MMC etc.

For other newbies if you don't have numeraire then you need to buy some from Coinbase and transfer it to your wallet. The address will be found in Account → Wallet

More advanced users may be interested in [@ml_is_lyf](#) post about staking

Hope that's useful

JD
