

When I stake ETH with Lido, I received an equivalent amount of stETH in return. To get better rewards, I should use these stEth on other Defi platforms to get more yields. I am new to LSDfi, and I don't know which platform/app is best for me. I heard several options, such as providing liquidity on the ETH/stETH-pool on Curve or use stETH as collateral to take out a loan on Aave, etc. But I don't know which one is better for new LSDfi users. Any suggestion is welcome. Thanks.
