

Hi everyone, my name is Luz and I started this thread to encourage holders to introduce themselves to the community. I suggest you talk about your experiences with Web3 and the ecosystem, what are your skills and characteristics that you think are most interesting at the moment, plans for the future, what you expect from the project and what else you want.

I start:

1. My name is Matheus Luz (but I prefer to be called Luz);
2. My experiences with Web3 are brief compared to founders of major projects that had their beginnings in the NFTs, but I often get in touch with founders to give ideas on what they could implement (and how to do it) in their projects to they become more solid and interesting to the community (as well as attracting more holders and others).
3. I consider as my main characteristics and skills: long-term vision, systemic vision, creativity, ambition, focus and willpower.
4. My plans for the future are to help the project grow, adding value to find and build interesting solutions for the community and more.
5. I believe that this DAO will be one of the few that will really be successful (at least for me, the Ape community has proved to be strong, which is essential for everything to work correctly) and with that thought, I intend to contribute what I can and I hope that all holders will also support the good projects that will be presented for everyone!

That's it, hugs and let's build together
