

JSON-RPC API

This section provides an interactive reference for the JSON-RPC API of MetaMask's [Wallet API](#). The API builds on a set of standard Ethereum methods with MetaMask-specific enhancements, and is designed for seamless integration into dapps.

View the JSON-RPC API methods by selecting a method in the left sidebar. You can test the methods directly in the page using the API playground, with pre-configured examples or custom parameters. You can also save URLs with custom parameters using your browser's bookmarks.

Each method may have one or more of the following labels:

- MetaMask
 - – The functionalities of these methods are specific to MetaMask, and may or may not be supported by other wallets.
- Restricted
 - – These methods are restricted and require requesting permission using [wallet_requestPermissions](#)
- .
- Mobile
 - – These methods are only available on MetaMask Mobile.
- Experimental
 - – These methods are experimental and may be changed in the future.
- Deprecated
 - - These methods are deprecated and may be removed in the future.
- Ethereum API
 - - These are standard Ethereum JSON-RPC API methods. See the [Ethereum wiki](#)
- for more information about these methods.
