

I was staking the AAVE token. I just completed the cool down and unstaked. The tokens ended up in my connected Portis wallet, which does not allow me to withdraw or send (or even see my) AAVE. Thank goodness I'm able to see my tokens within the protocol dashboard but there is no option to withdraw.

Can you recommend the best way to withdraw AAVE? Whether that be with a better wallet or within the protocol itself. Portis customer service has not been helpful thus far. Thank you for reading.
