

Getting started

The SDK initialization process will connect to the blockchain, fetch all relevant data and make it ready for further functionality and instructions.

The main point of interaction is the `index.ts` file * Initialize the SDK with the [Constructor](#) * . * Sync strategy data by calling [startDataSync](#) * . *

More detailed step by step guide on setting things up can be found here <https://github.com/bancorprotocol/carbon-simulator/tree/main/resources/sdk>
