

v5.3.0: 10/23/23

Highlights

- CHAIN_TYPE
- env variable which can provide different logic for fetchers, API, views, DB schema extensions are applied to the explorer. Additional values will be supported in upcoming releases - currently supported values are:
 - - ethereum
 - - - default value
 - - polygon_edge
 - - - chains based on Polygon Edge nodes
 - - rsk
 - - - for Rootstock (rskj node)
 - *
 - TVL display is live with the DefiLlama API integration
 - DB schema update which will support additional NFT views on owner addresses. The view is still in development, scheme update was required first.
 - IPFS_GATEWAY_URL
 - endpoint allows projects to connect Blockscout to their own IPFS gateway for fetching token metadata.
 - Many additional improvements and fixes on the indexer side and API.
 -

New Features List

- [#8512](#)
- - Add caching and improve/tabs-counters
- performance
- [#8472](#)
- - Integrate/api/v2/bytecodes/sources:search-all
- ofeth_bytecode_db
- [#8589](#)
- - DefiLlama TVL source
- [#8583](#)
- - Add stats widget for rootstock
- [#8542](#)
- - Add tracing for rootstock
- [#8561](#)
- [#8564](#)
- - Get historical market cap data from CoinGecko
- [#8543](#)
- - Fix polygon tracer
- [#8386](#)
- - Addowner_address_hash
- to thetoken_instances
- [#8530](#)
- - Addblock_type
- to search results
- [#8180](#)
- - Deposits and Withdrawals for Polygon Edge

- [#7996](#)
- - Add CoinBalance fetcher init query limit
- [#8658](#)
- - Remove block consensus on import fail
- [#8575](#)
- - Filter token transfers on coin balances updates
