

Dear fam:

I would like to share and completely open source the numerai dashboard I have built over the last 10 months for my personal usage.

Streamlit Cloud link

: https://share.streamlit.io/yifanxie/numerdash/main/numerdash_app.py

Source code:

[GitHub - yifanxie/numerdash: yet another numerai dashboard](#)

Overview

This provides the following

- Portfolio (i.e. bundles of models) based Stake P/L overview
- Performance, metrics(TC/Corr/FNCV3), trend tracking and comparison.

It is developed using Streamlit + NumerAPI, and hosted on Streamlit Cloud

Here are some screenshot examples:

Stake Overview

Usage Instruction

Should be easy enough to operate, but here is a simple [usage instruction](#)

Known issues and some remedies

- some typos here and there
- Live rounds P/L could display old values if the browser session was left open overnight - just open a new browser session
- In the "Stake_type" in live rounds P/L doesn't have TC yet.
- Streamlit Cloud reloading every 15 minutes also, sometime cause error - just need refreshing

Feel free to enjoy using it, or even better build on it

Acknowledgement

First of all, I want to thank Joe ([@ia_ai](#)) for 1) getting me back to the tournament, and 2) bouncing ideas and feedback with me for all these time

- All the dashboard builders especially [@ceunen](#) and [@ia_ai](#) for your existing implementations, got lots of inspiration from it.
- [@uuazed](#) and the Numerai team for Numerapi, without it this wouldn't be possible

Best Regards
