

Overview

Provide a [JSON configuration file](#) using the `-configfile` command line option when [starting Tessera](#) .

The configuration file must contain the options to start the transaction manager with a [local or remote enclave](#) .

You can also configure:

- Access to [keys](#)
- .
- [Key vaults](#)
- .
- The [Tessera API servers](#)
- .
- [Peer discovery](#)
- .
- [TLS](#)
- .
- An [external database](#)
- .
- Support for [multiple private states](#)
- and [resident groups](#)
- .
- [Cryptographic elliptic curves](#)
- .
- Support for [Hyperledger Besu](#)
- .
- [High availability](#)
- .

You can [override configuration options](#) using the command line.

View an [example configuration file](#) and [descriptions for each configuration item](#) . [Edit this page](#) Last updated on Oct 9, 2023
