

Hi there,

I had some Dydx on Ethereum. Initiated the bridge on Keplr dashboard, but the smart contract failed right in the middle where Dydx was wrapped on WethDydx. I wanted to restart the bridge ensuring I have enough Eth to cover the gas, but no platform reads my WethDydx. I can only see them in my Metamask. They all say I have zero Dydx to bridge.

Can someone help me? What should I do now?

Thanks a lot!
