

Hey everyone,

I'm fairly new to the world of crypto investing, and while I'm excited about the opportunities, I've heard so many stories about scams, sudden losses, and other pitfalls. I want to make smart decisions and avoid common mistakes.

If you've been in the crypto space for a while, I'd love to hear your advice:

- What are the biggest red flags to watch out for when choosing coins or platforms?
- How do you protect yourself from scams or bad trades?
- Is there one mistake you made early on that you wish you'd avoided?

I'm here to learn from your experiences and apply those lessons to my journey. Any advice or tips are greatly appreciated!
