

Hello Aztec Community.

In 2 weeks we will have a big hackathon happening in Brazil (EthSamba). Previously to this hackathon we will have a series of bootcamps to help students develop their knowledge.

One of the examples that I want to bring is: How to build your blind auction (Sealed auction) using Aztec. Do you have any suggestions or examples that I can check?

Also, only double checking. Is this forum the best way to communicate with the Aztec community in case the students wants to ask question regarding Noir?

Thanks!
