

Launch Details

Velocore V2 on Telos operates as an independent system from Velocore V2 on zkSyncEra and Linea. Velocore on Telos utilizes its uniqueTVC andveTVC tokens, and the launch is not based on a token presale but rather through liquidity bootstrapping in partnership with Telos Foundation.

However, through LayerZero, users from the existing zkSyncEra and Linea will be able to bridge theirVC andLVC tokens to the Telos mainnet. This will enable users to utilize their existing tokens within the Telos mainnet ecosystem.

Launching Schedule

- Official launch and emission go live— November 14th at 3AM UTC
- The front end will be released in advance to ensure a smooth user experience
-

Launching Method

- Without a presale, Telos Foundation and Velocore will each supply 25,000USDC
- and 250,000TVC
- as initial liquidity.
- An airdrop of veTVC for existing zkSyncEra and Linea ecosystem users will take place. Details will be announced later.
-
