

# Ecosystem

Quasar is built on tools provided by several open-sourced projects including:

- [Tendermint](#)
- [Cosmos SDK](#)
- [CosmWasm](#)
- [IBC](#)

We are appreciative of the groundwork already laid for Quasar to build interchain DAM applications. We are actively finding ways we can contribute back to the community through Quasar. If you have a project and would like to collaborate, please get in touch with us on Discord! [Previous Governance](#) [Next Security](#)
