

Sign Up with Email/Social/SMS

Introduction

When it comes to onboarding users, having a flexible sign-up flow that can accommodate different preferences is key. Whether users prefer to sign up with their email, phone number, social media accounts, or directly with a wallet, providing the options that fit your user's needs can make the onboarding process smoother, more user-friendly, and increase conversion.

That is why we are offering the flexibility to design the sign up screen to suit your needs. You can now choose whether you want users to sign up with their email, phone number, social accounts, or with wallets. You can configure this as needed.

If you then want to generate a wallet for your users when they sign up using email, social or sms, please refer [the embedded wallets section](#) after configuring email/social/sms below.

Sign up with Email

1. Go to the [email, social & sms page](#)
2. in your developer dashboard.
3. Toggle on the "Enable email signup" option.

Sign up with Social

1. Go to the [email, social & sms page](#)
2. in your developer dashboard.
3. Toggle on the "Enable social auth" option.
4. Click the down button on the far right of the social signup option to expand the configuration options.
5. Configure the individual social signup options as needed following [the social providers section](#)
6. .

Sign up with SMS

1. Go to the [email, social & sms page](#)
2. in your developer dashboard.
3. Toggle on the "Enable SMS signup" option.
4. Click the down button on the far right of the social signup option to expand the configuration options.
5. Configure the SMS signup options as needed following [the SMS section](#)
6. .
7. That's it! Your users can now log in with sms, and their phone number will be added as an extra verified credential on their [user-object](#)
8. .
