Verite has provided several interactive demos as well as sample projects to showcase some use-cases of the Verite standards. The code is freely available on [Github](#) . To run all of the demos, you will need code found in two repositories: verite and demo-wallet .

1. Setup and run Verite's [verite](#)
2. Setup and run Verite's [demo-wallet](#)
3. Select a demo in verite to be guided through the steps

The verite repository also hosts several standalone code samples to assist in developing your own solution. Those samples are located at:

- packages/demo-issuer
- packages/demo-verifier
