

We've deployed an important Data-API update to the Flashbots relay for querying builder submissions: removing the limit for entries when querying a specific slot

(or block\_number

).

- previously there was a limit of 200 entries per request
- but the relay is nowadays receiving up to 450 bids per slot
- now, when querying for a specific slot

or block\_number

, you'll now get as many submissions as there are!

Note: If you've previously saved/indexed all the bids, you may have incomplete information and should reindex (starting with the bulk data download).

The bulk data downloads are available here: [flashbots-boost-relay-public.s3.us-east-2.amazonaws.com](https://flashbots-boost-relay-public.s3.us-east-2.amazonaws.com)

For reference see also the [Data API documentation](#).
