

An unusually high number of swaps has recently been observed through the wstETH-WETH

GMX V2 pool. The change in GM token price for this pool also does not exactly match expectations.

Due to these observations, the wstETH-WETH GMX V2 market has been temporarily disabled as a precaution. Contributors are investigating the situation in detail with Chainlink, the Oracle data provider, and Chaos Labs, the security and risk assessment partner.

In addition, swap, deposit and withdrawal fees for the wstETH-USDe

pool have been increased to 0.5% as a precautionary measure.

Updates will be shared when more information is available. Please stay tuned.
