

We at [TradingStrategy.ai](https://tradingstrategy.ai) are building an algorithmic trading engine for DeFi. We'd like to integrate Spark / MakerDAO savings into our strategies - basically instead of having unallocated cash, you supply credit with this cash.

Are the historical saving rates available somewhere, so that we could have MakerDAO backtesting in our strategies? Longer the better, preferably all the way to 2018. On-chain source would be the best, but necessary.
