

I sent you a question not too long ago about a transaction that I made by mistake, I bought more than 6000 lend long time ago and because my lack of knowledge I had sent the token to an address that I am still not able to recover the money. Here is the TrxID = 0x89d3be5c83f3a8e8aa071dc8c6015251308b0df72820dbbcabf45d13991de4a7 can you tell me what I did wrong? and if I may recover my funds? I check this adress at etherscan and show the from and to adress. The adress that I send the token according to etherscan is Aavee lend adress. Thanks for any information you can give me.
