

The Voting system is BROKEN, and it is completely run by 5 -7 whales who have 5-15 million delegated votes each! That's ridiculous! Where have you seen anywhere in the world a voting system where a single person can cast 10 million votes?? And vote on the proposal he made himself where he is asking for 20 million USD?? And worst of all, thanks to his 10 million votes, he gets the 1.000.000 UNI and immediately sells half of it... And yea, tries to sweet talk out of it, because, that's what lawyers do, right??

Not only that, there's also good and honest proposals that NEVER get to Consensus Check because a SINGLE WHALE doesn't like it and votes "NO" with millions of votes... Even though there's hundreds of people that are in favor of the proposal... That's just WRONG!

Didn't even do a temperature check for this proposal, because, who would really give up that kind of voting power, right?

So this is a proposal to NOT ALLOW ANY DELEGATES to vote on ANY Proposal, and to CHANGE the voting system as following:

- If a person wants to vote on any proposal, they should have at least 1 UNI on their wallet.
- Regardless of the number of UNI they on their wallet, they can only cast 1 VOTE.

This will allow us to have a more FAIR and DEMOCRATIC system. It will also help avoid bots with the 1 UNI requirement. And if a person has 10 million UNI and wants to cast 10m votes, they have to create 10m wallets and transfer 1 UNI to each!

Also, if we abolish delegates, the proposal requirements should change since it will be impossible to meet them. Most proposals have around 300-400 votes, so we suggest a Temperature check should pass with 150 votes after a 5 day period of voting time, a Consensus Check should pass with 200 votes after a 7 day period of time, and the Final Proposals should pass with 500 votes after a 15 day period of time. Of course the final numbers can be decided over a separate vote.

You can VOTE for this proposal [HERE](#):
