

[snapshot.page](#) has been bootstrapped and now you can [create proposals on snapshot.page/#/uniswap](#) to understand community support for your proposals, before furthering your proposal e.g. via autonomous proposals or advocating for delegation. Please give it a try to understand support for your proposals.

Some tips:

- You must delegate for votes to count on a proposal
- You can set the proposal snapshot block number to around the end date of the proposal (or any future block number) so people can delegate after the proposal is created and voting has started

Currently there is no UNI requirement for a proposal to show up on the snapshot page.

This is open source and you are able to send pull requests [to the repository](#).
