

Dear Uniswap lovers,

we are positively impacted by the strength of this community and we really believe that Uniswap is not only building a Decentralized Exchange but more important than that , it's giving power to the people who want to create their Blockchain products and now with the governance token it's an even more important step on the right direction.

I'd like to emphasize here that we at EasySwap believe that UNI tokens are not just a way to make easy money but more important than that it's a way for us, product/content creator to actively participate on the governance of this Exchange.

That said, I'd like to request your attention to the fact that most of the now reputable products had to fight for their space on Uniswap and due to the storm of scams that was and is still hurting users portfolios, the tool we found to protect the Uniswap users was to send the liquidity tokens to a VAULT CONTRACT that eliminates the changes of RUG PULLS.

We understand that this was a major step taken by many of us, product providers, and it became the new standard of security for Uniswap trading. Almost nobody buys a coin that is not sent to a VAULT.

Of course we didn't know of the airdrop and what were the conditions to be entitled to these coins and it looks like the airdrop was not given to the accounts

Here it is the address of the VAULT contract that holds our liquidity tokens.

[Ethereum \(ETH\) Blockchain Explorer](#)

[Contract Address 0x376b512ccd0704ccc4153870918c6dca2c0ee1c5 | Etherscan](#)

The Contract Address 0x376b512ccd0704ccc4153870918c6dca2c0ee1c5 page allows users to view the source code, transactions, balances, and analytics for the contract address. Users can also interact and make transactions to the contract directly on...

I hope the community shows appreciation to the trustworthy projects that are trying to stand out of the crowd, prevent users from being scammed and bring some value to the decentralization of our assets.
