

Blocknative MEV Protection

Blocknative provides MEV protection for users with full observability during all stages of the transaction's lifecycle. This allows users to protect themselves against frontrunning and sandwiching bots without sacrificing visibility.

- Wallets and Dapps
- can integrate [Transaction Boost](#)
- to enable users to send private transactions to multiple protect RPC endpoints while monitoring their transaction statuses.
- Individuals
- can use [Transaction Boost](#)
- to send private transactions to multiple protect RPC endpoints while monitoring their transaction statuses.
-

If you have any questions please join the Blocknative [discord channel](#) where our engineers can provide 1:1 guidance.
