

Hi all,

would like to check the sentiment about this proposal.

Synthetix as per [SIP-271](#) is considering (council voted [yes](#)) to suspend the whole system few hours before the merge and re-activate post after testing everything is ok.

This affect sUSD transfers which won't be possible during the stop.

Aave has two markets on V2 and V3, totalling 5.03M/2.48M and 14.44M/11.42M respectively (supplied/borrowed).

On V2 sUSD can be only borrowed on V3 can be used as collateral too. This could expose to the risk of having positions that cannot be liquidated (if necessary) during the stop i.e. borrowing x against sUSD, borrowing sUSD against y. These positions could be created close to the stop.

Anyway impact is limited considering the relative size of the market.

The proposal is to temporarily pause sUSD markets and re-enable them after Synthetix get unsuspended.

Would love your feedback.
